Recent meetings: Update on Secure FloridaNet Data Portals
Posted by Brett Boston on Feb 12

A. The Private-Public Committee met February 11, 2014 to discuss data handling procedures for private sector data sharing.

Action Items:

1.   We are reviewing the procedures established by http://www.isaccouncil.org for private-public data sharing. FloridaNet will utilize the best practices from the ISAC effort for the private portal.

2.   There was a thorough discussion of the non-disclosure agreement process.

3.   The groups discussed communicating the need to establish a point of contact with existing private sector companies that will be involved in FloridaNet for legal contacts and for contacts providing data.

4.   FloridaNet will encourage FirstNet to establish an ISAC site for FirstNet that would eventually serve the nation and FloridaNet. In the interim, the Committee was comfortable with FloridaNet moving forward, utilizing the standards of ISAC for implementing the FloridaNet private portal.

5.   The team discussed the FloridaNet Speakers Bureau. Main recommendations were:

a.   Utilize FirstNet staff for speakers, as a first choice

b.   Reach out to multiple FloridaNet participants to assist with speaking engagements that cannot be covered by immediate staff.

c.   A panel approach that utilizes the public and private partners to jointly present should be used, if possible.

d.   Ensure a wide-variety of consistent presentations are available for speaking engagements.

e.   We will get the commitment from our advisory members to ensure the presentation of the FloridaNet message is representative of FloridaNet, and not the specific presenter's organization.

6.   Provide a presentation on data portals in the upcoming listening sessions.

B. Data Portal for Public Data Sharing meeting held February 11, 2014.

The Metadata Interim Working Group agreed on recommendations for developing data handling procedures for ensuring secure public sector data sharing. The recommendations have been approved and FloridaNet is working on implementation of the recommendations.

The public sector portal design and management procedures will be presented to the FloridaNet team at our next meeting.
